Tabla de contenido

¿Qué es DVC?

Data Version Control (DVC) es un sistema de control de versiones de datos open source.

Características de

- Permite manejar modelos grandes y archivos de datos que no se pueden manejar con Git.
 - Compatible con Git

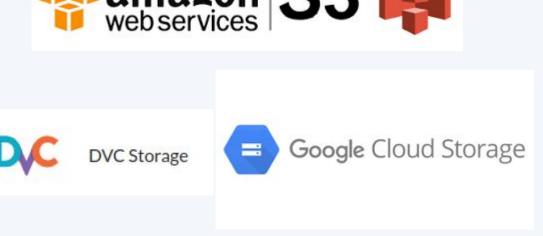

Almacenamiento

 Agnóstico al almacenamiento y lenguaje de programación.

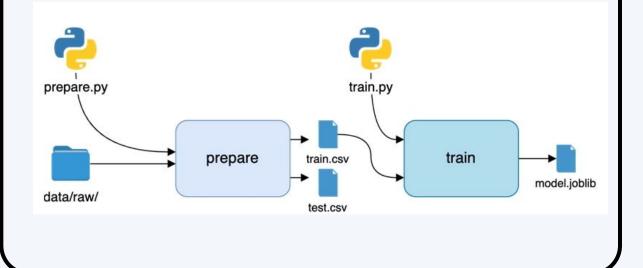

Replicabilidad

 Ayuda a administrar la complejidad de los pipelines de ML para que pueda entrenar el mismo modelo repetidamente.

Benchmark

	Open Source	Data Format Agnostic	Cloud/Storage Agnostic* (Supports most common cloud and storage types)	Simple to Use	Easy Support for BIG Data
DVC	(Apache 2.0)	▼	▼	▼	×
A DELTA LAKE	(Apache 2.0)	×	~	×	
Git Large File Storage	(MIT)	▼	×	▼	×
d Pachyde m	(Non-standard license)	▼	▼	×	▽
DOLT	(Apache 2.0)	×	×	×	×

Principales comandos

```
$ dvc init # initialize the repo
$ dvc add . # add the files that have been changed
$ dvc commit -m "making some changes" # commit the updates with a message
$ dvc remote add newremote s3://bucket/path # point the repo to an S3
bucket for storage
$ dvc push # push the changes to the DVC repo hosted in the default S3
bucket
$ dvc pull # pull the latest changes from the DVC repo hosted in the
default S3 bucket
```

¿Cómo funciona?

git add --all

DVC		Git	
DVC remote		GitHub	
DVC cache		Git staging area	
Local DVC con	trol	Local Git control	

DVC	Git	
control	control	
DVC remote	GitHub	
DVC cache	Git staging area	
Local DVC control	Local Git control train.dvc add .gitignore	
2		

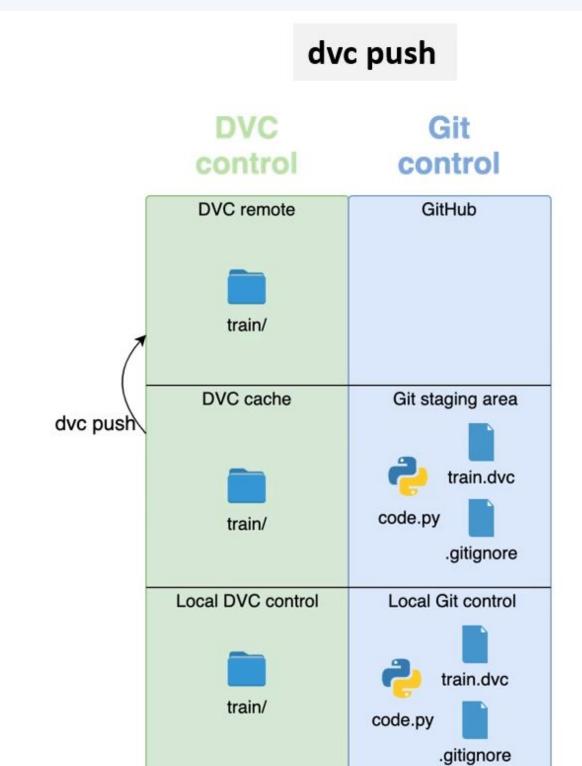

code.py train/

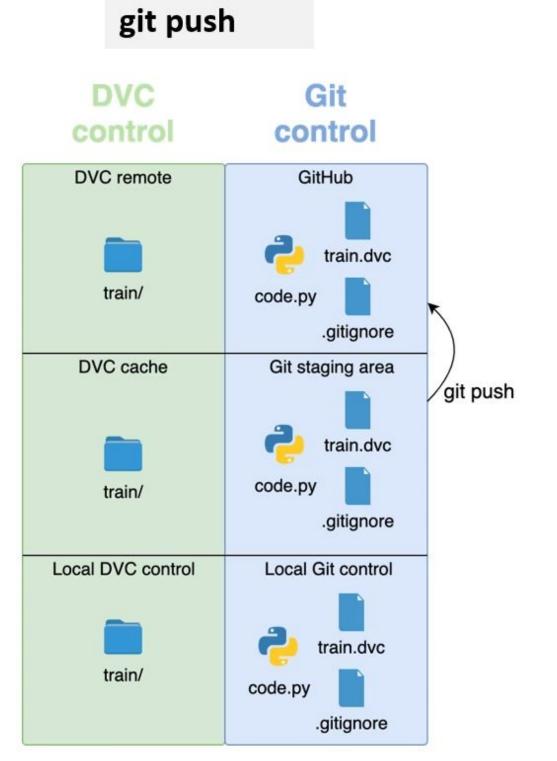

DVC	Git
control	control
DVC remote	GitHub
DVC cache	Git staging area
train/	code.py .gitignore
Local DVC control train/ git add	Local Git control train.dvc code.py .gitignore
code.py	

¿Cómo funciona?

Git DVC control control **DVC** remote GitHub train.dvc train/ code.py .gitignore **DVC** cache Git staging area ✓ git fetch dvc fetch train.dvc code.py train/ .gitignore Local DVC control Local Git control git checkout dvc checkout train.dvc train/ code.py

.gitignore

dvc pull

Instalación

i Note that Python 3.8+ is needed to get the latest version of DVC.

```
$ pip install dvc
```

i Requires Miniconda⊕ or Anaconda Distribution ₽.

```
$ conda install -c conda-forge mamba # installs much faster than
$ mamba install -c conda-forge dvc
```
